

Use Case Flow – Vehicle Parking System

Goal	Vehicle Parking and Payment
Actor	User
Main Flow	1. User logs into the Vehicle Parking System 2. User registers or selects a vehicle. 3. User checks the availability of parking slots. 4. User selects an available parking slot and parks the vehicle. 5. User exits the parking area after completing the parking session. 6. User views the calculated parking fee based on the parking duration. 7. User selects a supported payment method and completes the payment. 8. User receives confirmation of the completed parking session.

Alternate Flow	Invalid Login Credentials At Step 1, if the login credentials are invalid: 1a. System displays an error message and asks the user to retry. 1b. User may retry logging in. No Parking Slot Available At Step 3, if no parking slot is available: 3a. System informs the user that no parking slot is currently available. 3b. User may try again when a slot becomes available. Payment Failure At Step 7, if the payment fails: 7a. System displays a payment failure message. 7b. User may retry the payment using a supported payment method.
